

Photometric Reports

FC Measurements at Distance, segments spread (not pointed in the same spot). Full White, 90° x 120° beam angle

Distance	FC Reading
5'	310
10'	81
15'	41
20'	26
25'	21'

Recommended Spacing and Coverage

While the distance apart and total coverage accomplished varies by the focus of the segments, brightness required, desired flatness, and vertical distance beyond the lit area, the following is a guideline for good spacing of the Bloom Cyclo.

You may find that your application requires less fixtures or more, but use this as a guideline in your calculations.

Distance from Lit Surface	Spacing Between Fixtures (Horizontal)	Approx. Vertical Coverage
1'	3'	12'+
2'	4'	16'+
3'	5'	20'+
4'	7'	24'+
